

UBC At-a-Glance

A global medical and scientific affairs organization

Who is UBC?

United BioSource Corporation (UBC) is a global medical and scientific affairs organization that partners with life science companies to develop and commercialize their products.

We help generate authoritative, real-world evidence of product effectiveness, safety and value to assist healthcare decisions and enhance patient care. UBC integrates scientific and industry experts, operations professionals and leading-edge technologies to provide innovative solutions across the product lifecycle.

We strive to be an intelligent and nimble, customer-focused organization that offers a unique combination of strategic vision, scientific expertise and operational excellence. With experts and operations in strategic locations worldwide, UBC offers the global reach and local expertise necessary to support the largest and most complex multinational product development programs.

Our clients can expect UBC to design and deliver high-quality solutions tailored to meet their unique needs.

Evidence Matters®

UBC's unique strength is the generation, analysis and communication of real-world evidence throughout the product life cycle.

History

Formed in 2003, UBC raised \$150 million in private equity funding for acquisitions and development from investors that recognized a unique opportunity to build a new generation organization tailored specifically to address rising demand for scientific evidence in the healthcare industry.

In 2010, UBC was acquired by Medco Health Solutions, Inc., an evidence-based research organization focused solely on novel research, analytics and new discoveries that close the gap between scientific discovery and medical practice for improved patient outcomes and lower overall healthcare costs.

Today, UBC has offices in more than 20 countries across the globe, dedicated to meeting the needs of life science companies by providing real-world evidence.

UBC Core Service Areas

Scientific & Medical Affairs

- Peri- and post-approval development and commercialization
- Safety, risk management and epidemiology
- Outcomes research
- Health economics
- Market access: Coverage and reimbursement
- Comparative effectiveness and value
- Regulatory strategy and support
- Data management and coordination
- Medical publication and education

Product-to-Patient Access

- Adherence programs
- Clinical call center
- Clinical coordination and site services
- Skilled nursing and clinical research support

Specialty Clinical Solutions

- Rater training and certification
- Endpoint reliability
- Clinical rating instrument solutions
- Computerized cognitive testing

Clinical Technologies

- Interactive voice and web services (IVRS/IWRS)
- Supply management and accountability
- Screening and randomization
- Cognitive testing
- Electronic data capture (EDC)
- eLearning
- Client portals
- Adaptive trial solutions
